PROFESSIONAL SUMMARY

Full Stack & Mobile Developer with 15+ months of hands-on production experience delivering scalable SaaS platforms across internship and freelance engagements. Proficient in the MERN stack, React Native, and microservices architecture deployed on AWS. Experienced with CI/CD pipelines, containerization with Docker, real-time systems (Socket.IO, Kafka), and AI-assisted development workflows. Proven ability to own features end-to-end — from system design and architecture decisions to production deployment — across multiple live products simultaneously.

EXPERIENCE

Full Stack & Mobile Developer — Freelance

Oct 2025 – Present

Tech Signific / Remote

- Architected and delivered two large-scale, multi-tenant SaaS platforms from the ground up — a Restaurant Management System and a School Operations Management System — spanning mobile apps (React Native), web admin panels (React), and Node.js microservices backends.
- Designed and maintained shared infrastructure including MongoDB Atlas, Redis (caching & sessions), Kafka (async event-driven messaging), NGINX API gateway, and Socket.IO / SSE for real-time communication.
- Implemented enterprise-grade security and reliability patterns: JWT authentication, Role-Based Access Control (RBAC), idempotency middleware, dead-letter queues, and graceful shutdown handling.
- Established full DevOps lifecycle: Docker Compose environments (dev / stage / prod), semantic versioning, GitHub Actions CI/CD pipelines, AWS EC2 deployments, and Prometheus + Grafana monitoring dashboards.
- Leveraged AI-assisted development tools (Cursor, OpenCode) and multiple LLMs (Claude, Gemini, Qwen, DeepSeek) to accelerate velocity and maintain high code quality across concurrent products.

Full Stack Developer — Intern

Jan 2025 – Jul 2025

Tech Signific / Remote

- Built and maintained RESTful APIs with Node.js and Express; drove backend scalability and performance improvements that supported production growth.
- Developed responsive React UI components and consistently delivered features within Agile sprint cycles, collaborating via Git and Jira.
- Demonstrated consistent delivery and ownership, leading directly to a full-time freelance contract upon internship completion.

COMPANY PROJECTS (Tech Signific)

Restaurant Management SaaS | *React Native (Expo), React 18, Node.js, MongoDB Atlas, Redis, Kafka, Docker, AWS EC2, Socket.IO, NGINX*

- Designed and built a comprehensive multi-tenant SaaS platform covering restaurant onboarding, subscription billing, staff operations, kitchen display systems, table management, inventory control, and customer ordering flows.
- Architected an event-driven microservices backend with Kafka for async cross-service messaging, Redis-backed caching and session management, and an NGINX API gateway with per-route rate limiting.
- Built end-to-end customer ordering experiences: menu browsing with real-time stock levels, coupon/discount engine with automatic recalculation, and live order status tracking via Socket.IO.
- Hardened production reliability by introducing connection pooling, graceful shutdown handling, dead-letter queues, and idempotency keys — significantly reducing error rates in distributed service calls.

School Operations Management SaaS | *React Native (Expo), React (Vite), Node.js, MongoDB Atlas, Redis, Kafka, Socket.IO, Docker, AWS EC2*

- Delivered a multi-tenant SaaS serving multiple user roles (administrators, teachers, staff, students, parents) across a React Native mobile app and a React web admin panel, with role-filtered navigation per persona.
- Built real-time transport tracking with Socket.IO session management and an event-driven automated attendance system powered by Kafka consumer pipelines.
- Developed campus-scoped student and classroom management modules including bulk operations, promotion workflows, per-subject teacher assignment, and profile-completion gating for feature access.
- Continuously improved security posture through audits addressing NoSQL injection risks, RBAC scope enforcement, Kafka consumer reliability, and duplicate event resolution.

PERSONAL PROJECTS

ClientFlow [Live Demo](#) | *React, Node.js, MongoDB, Stripe, Docker, JWT / RBAC, GitHub Actions, AWS EC2*

- Full-stack client management platform with role-based dashboards, secure workflows, and Stripe payment integration; fully containerized with a GitHub Actions CI/CD pipeline and AWS EC2 deployment.

Vera [Live Demo](#) | *React, TypeScript, Express, MongoDB*

- Task management web app featuring a glassmorphism UI, JWT authentication, and persistent database storage.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, React Native (Expo), Tailwind CSS, Vite, TanStack Query, Zustand, Framer Motion

Backend: Node.js, Express.js, REST APIs, Microservices Architecture, Socket.IO, SSE, Apache Kafka

Databases: MongoDB Atlas, Redis, Mongoose, PostgreSQL

DevOps & Cloud: Docker, AWS EC2, NGINX, GitHub Actions (CI/CD), Prometheus, Grafana

Security: JWT, OAuth 2.0, RBAC, Idempotency Keys, Rate Limiting, Security Auditing

AI Dev Workflow: Cursor, OpenCode, MCP Integrations, AI Agent Configuration — Claude, Gemini, Qwen, DeepSeek

Tools: Git, GitHub, Jira, Postman, VS Code

EDUCATION

KLS Gogte Institute of Technology

2020 – 2024

Bachelor of Engineering, Electronics & Communication | Belgaum
